## CLAIMS

SEP 25 2007

What is claimed is:

Claims 1 - 39. (Cancelled)

Claim 40. (Currently Amended) The method of Claim 39 52, further comprising applying a releasable adhesive to a portion of said second surface for facilitating at least partial separation and re-attachment of said device label from said periphery of said object when said device label is affixed about said periphery of said object.

Claim 41. (Currently Amended) The method of Claim 39 52, further comprising applying a protective material to at least one portion of said member not bearing adhesive.

Claim 42. (Currently Amended) The method of Claim 39 52, further comprising partially deadening at least a portion of said adhesive.

Claim 43. (Currently Amended) The method of Claim 39 52, wherein said substantially planar member further comprises a tab for facilitating at least partial separation and re-attachment of said device label from an said object ~~about which it has been affixed~~.

Claim 44. (Original) The method of Claim 43, further comprising substantially completely deadening said adhesive applied to said tab.

Claim 45. (Currently Amended) The method of Claim 39 52, wherein said substantially planar member further comprises a recessed edge corresponding to said protruding tab for facilitating at least partial separation and re-attachment of said device label from said periphery of said object when said device label is affixed about said periphery of said object.

Claim 46. (Currently Amended) The method of Claim 45, wherein said member further comprises a tab for facilitating at least partial separation and re-attachment of said device label from an said object ~~about which it has been affixed~~.

Claim 47. (Currently Amended) The method of Claim 46, wherein at least a portion of said first portion of said substantially planar member is suitable for providing potential tamper evidencing of a capped opening of an said object ~~to which said device is affixed about~~.

Claim 48. (Currently Amended) The method of Claim 39 52, further comprising providing at least one perforation in said planar member.

Claim 49. (Original) The method of Claim 48, wherein said perforation is positioned to facilitate separation of a part of said member from at least one other part of said member.

Claim 50. (Currently Amended) The method of Claim 49, wherein at least one of said parts is suitable for providing potential tamper evidencing of an said object ~~to which said device is affixed about~~.

Claim 51. (Currently Amended) The method of Claim 50, wherein said substantially planar member further comprises a recessed edge for facilitating at least partial separation and re-attachment of said ~~device~~ label from said periphery of said object when said ~~device~~ label is affixed about said periphery of said object.

Claim 52. (New) A label for an object, said label comprising:

a substantially planar member having oppositely disposed first and second surfaces, a length, a length axis along said length, a first end, a second end, a first portion having a top edge and a bottom edge, and a second portion having a top edge and a bottom edge;

wherein said first and second ends are located at opposite ends along said length axis; and

wherein said first portion is adjacent to said first end and said second portion is adjacent to said second end; and

wherein said length is greater than a periphery of said object; and

wherein said top and bottom edges of said first portion are parallel, and said top and bottom edges of said second portion are parallel, and said top and bottom edges of said first portion are at an oblique angle to said top and bottom edges of said second portion;

printed indicia on at least a portion of said first surface and at least a portion of said second surface; and

pressure sensitive adhesive applied to at least a portion of said second surface, said pressure sensitive adhesive being suitable for affixing said label about said periphery of said object.
